

How Albert Helps Accelerate Innovation

Did you know a large percentage of the work week in R&D labs is spent compensating for outdated systems and manual processes?

We put laboratory activities under the microscope to evaluate time saved with Albert throughout the R&D process.

The results? Based on a lab of 40 team members, we calculated total time savings of 38% a week using Albert. Check out our findings!

Lab Breakdown

Time savings based on a team of 20 scientists, 10 technicians, 4 analysts, and 6 managers

Material Exploration and Inventory Management

32%
Average Time Savings

On average, a team of 40 spends **250+ hours a week** researching materials and managing inventory in the lab.

With Albert, scientists save time by leveraging real-time inventory and 50,000+ commercially available raw materials to quickly explore and find the right ones.

Formulations and Design of Experiments

34%
Average Time Savings

On average, a team of 40 spends **200+ hours a week** designing experiments and iterating on formulas.

With Albert, scientists are able to leverage historical data from past experiments along with real-time insights and predictions that expedite formulation.

Managing Experiments and Resource Allocation

54%
Average Time Savings

On average, a team of 40 spends **600+ hours a week** running experiments using inefficient resource allocation and manual data capture from equipment.

With Albert, teams are able to manage tasks more efficiently by collecting, organizing, and sharing trackable data—from anywhere.

Shipping Compliant Samples and Products

56%
Average Time Savings

On average, a team of 40 spends **80+ hours a week** manually creating regulatory compliant documentation and labels before shipment.

With Albert, easily access real-time hazards and reports for lab compliance—plus, leverage one-click SDS and labels to ship samples to customers same-day!
